

Forklift Magnetic Sweeper - Upland™ Series

Fork Mounted Forklift Magnetic Sweeper

with ground tracking four link suspension

Needs/Problems for those wanting to use a fork mounted magnetic sweeper

DEBRIS CAUSING FLAT TIRES

The flat tires on forklifts and other vehicles entering, exiting and moving about the property and the resulting cost, interruption and delays are the problems that in most cases create the need for the use of a magnetic sweeper.

FORKLIFT FIT

Forklift owners want a magnetic sweeper that is easy to install and connect and one that fits almost every forklift on the market.

The Upland Solutions

- The Upland was designed specifically to pickup and remove debris of this type; nails, screws, wire, discarded pieces from fabrication activities, bolts, nuts, pins, screw drivers, wrenches, etc.

- The Upland easily mounts to forklift forks up to 5.5" inches wide because of fork pocket openings that are 3.625" inches high by 5.625" inches wide.

- The fork pockets are on 22" inch centers to fit most forklifts.

Forklift Magnetic Sweeper - Upland™ Series

Needs/Problems for those wanting to use a fork mounted magnetic sweeper

GROUND CONTACT

Users of fork mount magnetic sweepers have a problem with their magnet hitting the ground if the surface is not completely flat because the magnet is in front of both sets of forklift wheels. If the forklift operator isn't closely monitoring the terrain and height of the magnet all it takes to cause a ground strike is a rise in the ground in front of the magnet or going over a bump with the rear of the forklift. This movement translated over the distance between the forklift wheels and the magnet can cause the magnet to suddenly strike the ground.

The Upland Solutions

- The Upland features a semi suspended Four-link design, this allows movement of the magnet to be independent of the forklift to maintain a set sweeping height over any terrain.
- The Upland also pivots 360°, eliminating the need to raise the magnet even for the tightest turns.
- In extreme conditions the Upland's angled stainless steel debris pan will protect the core magnet by deflecting obstacles and preventing hang-ups that could occur with sharp edges.
- If the pan is struck, the Upland suspension will travel up and over the obstruction preventing damage.

Forklift Magnetic Sweeper - Upland™ Series

Needs/Problems for those wanting to use a fork mounted magnetic sweeper

The Upland Solutions

EASE OF USE

Forklift operators want a magnetic sweeper that's easy to clean off, they don't want to get down on their hands and knees at ground level to clean a magnet off.

Forklift operators want something to catch the debris when they clean the magnet off so that cleaning the magnet off doesn't become a big secondary job.

- Easily connect to the Upland by inserting the forklift forks in the fork pockets and clamp the forks in the fork pockets by turning the T-handles.
- The Upland is easily cleaned off by using the forklift to lift the magnet over a bin or dumpster and pulling or pushing down on one of the release handles on each side of the magnet and the debris will fall in the bin.

PROFESSIONAL PERFORMANCE AND POWER

Commercial and industrial Forklift owners and users want a magnetic sweeper that's going to work in tough dirty conditions to ensure removal of unwanted metal debris. We know industrial and commercial users don't want to buy something that only half works.

- The Upland is a permanently charged magnet, power will never decrease, ensuring years of use.
- The Upland magnet is completely enclosed in a stainless steel housing for years of use.
- The upland will pick up a 2 ½ inch nail when the bottom of the magnet is 10 ¾ inches off the ground providing plenty of pickup power performance in dirt and gravel and when operating on moving forklifts. To maximize performance we recommend a sweeping height as low as possible.

DURABILITY

Not only does it have to work, and be easy to use, but industrial and commercial forklift owners and users want a forklift magnet that will last as long as the forklift.

- Heavy Duty steel and stainless steel construction.
- Permanently charged grade C8 magnets that will never need to be recharged.

Upland Specifications

Product Name

Upland - Forklift Magnetic Sweeper

Sweeper Width

Upland 56 - 56"

Magnet Dimensions Inside Each of the 3 Housing (unspaced)

Upland 56 - 6" H x 6" W x 56" L

Total Product Weight

Upland 56 - 838 lbs

Total Shipping Weight

Upland 56 - 890 lbs

Cleaning Method

Debris Release Handles / Flip down stainless steel debris pan.

Sweeping Height Adjustability

Yes, adjustable sweeping height from 1" - 4" via axle position adjustment.

Mounting Point

Forklift forks

Magnet Type

Permanently Charged C8 Magnets

Forklift Fit

Designed to fit most forklifts.

Maximum Lifting Height

(measures in 2 1/2" 8 penny nails)

10 3/4 inches

Construction

- Steel
- Stainless Steel
